

Do you know?

- You can give hope to eight (08) other people closing on their end of life.
- Thousands of patients die an untimely death due to an organ failure.
- Most of these patients can be saved, only by transplanting a new organ.
- You can be the light at the end of the tunnel for many.
- Why waste yourself to earth (cremation/burial) when you can save a life.

What is 'Brain Death'?

- This is where a person no longer has activity in their brain stem due to a severe brain injury.
- They have permanently lost the potential for consciousness and the capacity to breathe.
- When this happens, a machine called a ventilator keeps oxygen circulating through the person's bloodstream.

There's no way of reversing it and the heart will eventually stop beating, even if a ventilator continues to be used.

What can you donate?

- One deceased organ donor can
- Donate organs
 - Heart
 - Lungs
 - Kidneys
 - Liver
 - Intestine
 - Pancreas
- to save **eight (08) lives**,
- Donate tissues including cornea, tendons and long bones etc. to benefit fifty (50) more people.

Who can donate?

- Anybody who is pronounced brain-dead can be a donor.
